This application is up for consideration.

A. Claims 1-16 are generic to a plurality of disclosed patentably distinct species comprising many co-solvents. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for an initiation of a search, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

B. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, drawn to a method, classified in class 430, subclass 300.
- II. Claims 11-16, drawn to an isotropic solution, classified in class 252, subclass 364.

Inventions of Group I and Group II are related as material and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the material as claimed can be practiced with another materially different material or (2) the material as claimed can be used in a materially different process of using that material (MPEP § 806.05(h)). In the instant case, the process for developing an exposed flexographic printing plate as claimed can be practiced with another materially different material such as known or commercially available solvent or solvent mixture. Applicants should show or

provide an evidence to the contrary. In the absence of convincing evidence, the restriction would not be removed.

Because these inventions are distinct for the reasons given above and have acquired the separate status and searches in the art and can be supported the separate patents as divided by applicants and have no evidence of the record that are not required the separate consideration and search since they are the obvious variants because the prior art being applied to one of them would be sufficient against all inventions, restriction for examination purposes as indicated is proper. Applicant should show or provide an evidence to the contrary. In the absence of convincing evidence, the restriction would not be removed.

C An additional consideration or search for more than one invention or subclass in the art is burdensome. Applicant should show or provide an evidence to the contrary. In the absence of convincing evidence, the restriction would not be removed.

D. However any process claim is permitted to be rejoined with a material claim provided (a) that the material claim is allowable and (b) the process claim must be contained all of the limitations of the allowable material claim in accordance with the authority stated in *In re Ochiai*, 37 USPQ2d 1127 or *In re Brouwer*, 37 USPQ2d 1663 and MPEP 821.04.

Art Unit: 1752

E. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

F. The record shows that there is no terminal disclaimer in the instant application for the instant claims 1-10 over claims 2-8 in Patent No. 6,162,593. Accordingly, there is no indication of an allowance of the application containing 1-10 until a proper and timely terminal disclaimer is on the record. It is urged that applicant early and timely file the terminal disclaimer to speed up the prosecution.

G. Other issues have not been considered until a proper election is made and resolved.
